EXPERIENCE

Razorpay

Nov 2024 – Present

Software Development Engineer

Bengaluru, Karnataka

- **Owned and shipped to production Razorpay's self-hosted LLM observability and evaluation platform** (Langfuse + ClickHouse); took it from proof-of-concept through architecture and cost approvals, self-hosted it end-to-end on **AWS EKS** (Terraform, Helm/Spinnaker, Grafana), added per-team cost attribution, and enabled teams to run LLM-as-a-Judge evaluations and CI quality gates — at a fraction of the cost of Langfuse Enterprise.
- Built the **Corporate Cards portal** in the Razorpay dashboard — spend insights, CSV export, and an in-dashboard acquisition page — so cardholders no longer leave for issuing-bank portals, **improving merchant retention**; built on **configuration-driven bank variants** (Yes Bank, RBL) with a PII-safe daily spend-feed pipeline and **internal ops actions** for entitlement linking and manual feed uploads across banks; earlier revamped the card sign-up flow, **lifting lead conversion by 30%**.
- Built an internal **PII masking/redaction SDK across 5 languages** (Go, Python, TypeScript, Ruby, Java) using Microsoft Presidio (NER + regex recognizers) — defense-in-depth for LLM traces (client-side masking, OTEL-collector and server-side ingestion masking, retroactive ClickHouse cleanup, retention).
- Led **TDS for Business Banking payouts end-to-end across 8 repositories** — authored tech specs; built TDS computation, LDC-certificate management, and async status propagation for single/bulk/API flows, plus **Edge/Kong API-gateway onboarding** via Terraform and Kubernetes manifests.
- Owned the **Account Statements** microservice — **12–20 lakh statements/day** across RBL, Yes Bank, IDFC, and Axis at **99.9% uptime** — and led the monolith → microservice decomposition that created it: migrated **37M+ records with zero downtime**, cut over **100% of statement-fetch traffic**, and segregated read/write databases.
- Onboarded **IDFC and Yes Bank** and designed **shared Elasticsearch infrastructure** — now reused across multiple pods, reducing infrastructure cost — with hybrid search cutting statement fetch **~15s → 200–500ms** and worker CPU by **45%**; re-architected reporting into a lake-only facts-table pipeline across 4 stacks, 100% rolled out in 2 days.
- Overhauled reconciliation across RBL, Yes Bank, and IDFC — redesigned rules, workspaces, and data-sourcing logic plus a UTR-coalesce fix — **raising the reconciliation rate from 20% to 90%**.
- Drove reliability — **MSK Kafka migration**, Go 1.24 upgrade, 100% base-pod availability, **95%+ unit-test coverage** — and resolved cross-service P0/P1 incidents (Vendor Experience CPU –80%).
- **Mentored engineers** and elevated engineering quality through detailed **PR reviews** and technical guidance.
- Earlier (Vendor Experience): shipped **merchant-led vendor KYC** (~40% onboarding-traction lift); fixed a **document-access vulnerability** across ~5 lakh applications; made **Tally sync idempotent**, purging **130K–140K** duplicate vendors.

Paytm Payments Bank

Jan 2022 – Nov 2024

Software Engineer

Noida, Uttar Pradesh

- Developed the **Order Management Service**, a **Java/Spring Boot** microservice (~40% faster order processing than the legacy system), powering fintech products — AEPS, NCMC, Fixed Deposits, FASTag, Core Banking, Debit/Prepaid Cards, Utility Payments, and Merchant Payout — serving millions of customers daily.
- Delivered a **dynamic-pricing** feature for the bank's digital catalogue (time-to-market –50%) and an **API layer automating back-office operations** (deployment changes –50%, manual errors eliminated).
- Secured microservice communication with **RSA, AES-GCM, and JWT** (security incidents –20%, per audit results) and boosted reliability by resolving order-processing bottlenecks (failure rate –25%).
- Authored **system-architecture and workflow documentation**, improving knowledge transfer and cutting new-engineer onboarding time by ~80%.

SKILLS & CERTIFICATIONS

Languages: Go (Golang), Java, Python, TypeScript, Ruby, PHP, Scala, SQL

Backend & Data: gRPC, Protobuf, Kafka, Microservices, Event-Driven & Distributed Systems, REST, Spring Boot; PostgreSQL, MySQL, ClickHouse, Elasticsearch, Redis

Cloud, Infra & IaC: AWS (EKS, EC2, S3, SQS, MSK, RDS, ElastiCache), Terraform, Terragrunt, Helm, Spinnaker, Docker, Kubernetes, Kong, Apache Airflow, CI/CD

Observability, AI & Certifications: Langfuse, OpenTelemetry, Grafana, Prometheus, Uptrace, CloudWatch, Presidio, LiteLLM, MCP; Google IT Automation with Python (Google); Intro to Cybersecurity Tools & Cyber Attacks (IBM)

EDUCATION

Ramaiah Institute of Technology

Aug 2018 – Jun 2022

B.E. in Electronics & Telecommunication (CGPA: 8.89)

Bengaluru, Karnataka
