Prashant Chauhan

Bengaluru, Karnataka, India | Backend Engineer — Payments, Distributed Systems, and LLM Infrastructure
+91 8147200203 | chnpr2318@gmail.com | linkedin.com/in/pacifich | flawless-a11y.github.io

Experience

slice Oct 2026 – Present
Senior Software Engineer (Backend) *Bengaluru, Karnataka*

- Own the backend for user-initiated payments on the slice app as part of the **App Payments** team.
- Consolidated **Redis clusters** across multiple microservices, validated with **k6** performance and load testing.

Razorpay Nov 2024 – Sep 2026
Software Development Engineer *Bengaluru, Karnataka*

- **Owned and shipped to production Razorpay's self-hosted LLM observability and evaluation platform** (Langfuse + ClickHouse), **now serving ∼6 AI products**; took it from proof-of-concept through architecture and cost approvals to a self-hosted **AWS EKS** deployment (Terraform, Helm/Spinnaker, Grafana) with per-team cost attribution, LLM-as-a-Judge evaluations, and CI quality gates at a fraction of enterprise cost; made team services agent-ready (AGENTS.md) for Claude Code/Cursor.
- Built the **Corporate Cards portal**, bringing card spend insights into the Razorpay dashboard so cardholders no longer leave for issuing-bank portals, **improving merchant retention**; shipped spend analytics, CSV export, an in-dashboard acquisition page, and ops actions (entitlement linking, daily spend-feed uploads) on **configuration-driven bank variants** (Yes Bank, RBL) with a PII-safe feed pipeline; earlier revamped sign-up, **lifting lead conversion 30%**.
- Shipped an internal **PII masking/redaction SDK across 5 languages** (Go, Python, TypeScript, Ruby, Java) using Microsoft Presidio (NER + regex recognizers) — **security-audit-passed** defense-in-depth for LLM traces (client-side masking, OTEL-collector and server-side ingestion masking, retroactive ClickHouse cleanup).
- Led **TDS (tax-deducted-at-source) for Business Banking payouts end-to-end across 8 repositories** — authored tech specs; built TDS computation, tax-certificate management, and SQS-backed async status propagation for single/bulk/API flows, plus **Kong** API-gateway onboarding via Terraform and Kubernetes manifests.
- Owned the **Account Statements** service — **12–20 lakh statements/day** across RBL, Yes Bank, IDFC, and Axis at **99.9% uptime** — and led its split from the monolith: migrated **37M+ records with zero downtime**, cut over **100% of statement-fetch traffic**, split read/write databases, and moved Kafka to **AWS MSK**.
- Onboarded **IDFC and Yes Bank** and designed **shared Elasticsearch infrastructure** — reused across pods, reducing infrastructure cost — with hybrid search cutting statement fetch **∼15s → 200–500ms** and worker CPU by **45%**; re-architected reporting onto pre-computed data-lake tables across 4 stacks, rolled out 100% in 2 days.
- Overhauled reconciliation across RBL, Yes Bank, and IDFC — redesigned rules, workspaces, and data-sourcing logic and fixed transaction-reference matching gaps — **raising the reconciliation rate from 20% to 90%**.
- **On-call across five services**; owned root cause on P0/P1 incidents — cut a vendor-payments service's **CPU by 80%** by collapsing 667 database reads per request to one — and raised unit-test coverage to **95%+**.
- **Mentored engineers** and elevated engineering quality through detailed **PR reviews** and technical guidance.
- On vendor payments: built **merchant-led vendor KYC** (∼40% onboarding lift); fixed a **document access-control flaw** across **∼5 lakh applications**; made **Tally sync idempotent** (130K+ duplicates purged).

Paytm Payments Bank Jan 2022 – Nov 2024
Software Engineer *Noida, Uttar Pradesh*

- Developed the **Order Management Service** (**Java/Spring Boot**, **∼40% faster** than legacy), powering AEPS, NCMC, Fixed Deposits, FASTag, Core Banking, cards, and merchant payouts for millions of daily users.
- Delivered a **dynamic-pricing** feature for the bank's digital catalogue (time-to-market −50%) and an **API layer automating back-office operations** (deployment changes −50%, manual errors eliminated).
- Secured microservice communication with **RSA, AES-GCM, and JWT** (security incidents −20%) and boosted reliability by resolving order-processing bottlenecks (failure rate −25%).
- Authored **architecture and workflow documentation**, cutting engineer onboarding time by **∼80%**.

Skills

Languages: Go (Golang), Java, Python, TypeScript, Ruby, PHP, Scala, SQL

Backend & Data: System Design, Microservices, Event-Driven and Distributed Systems, gRPC, Protobuf, Kafka, REST, Spring Boot; PostgreSQL, MySQL, ClickHouse, Elasticsearch, Redis

Cloud, Infra & IaC: AWS (EKS, EC2, S3, SQS, MSK, RDS, ElastiCache), Terraform, Terragrunt, Helm, Spinnaker, Docker, Kubernetes, Kong, Apache Airflow, CI/CD, k6

Observability & AI: Langfuse, OpenTelemetry, Grafana, Prometheus, Presidio, LiteLLM, MCP, GenAI infrastructure

Education

Ramaiah Institute of Technology Aug 2018 – Jun 2022
B.E. in Electronics & Telecommunication (CGPA: 8.89) *Bengaluru, Karnataka*
